

# Computers

- A **computer** is a *machine* that helps people.
- A computer cannot do anything by itself. It needs instructions called a *program* to tell it what to do.

Read each statement below.

Circle the letter in the **YES** column if you think a computer can do what the sentence says.

Circle the letter in the **NO** column if you think a computer can't do what the sentence says.

**YES**

**NO**

- |   |   |   |
|---|---|---|
| G | D | 1. A computer can remember lots of phone numbers at once.       |
| C | O | 2. A computer can wish you "Happy Birthday!"                    |
| O | H | 3. A computer can play chess with you.                          |
| A | D | 4. A computer can clean your room.                              |
| J | E | 5. A computer can tell time.                                    |
| O | V | 6. A computer can solve math problems faster than your teacher! |
| M | B | 7. A computer can take you out to lunch.                        |

Write each letter that you circled above the correct number to solve this message.

\_\_\_\_\_  
 1.            2.            3.            4.            5.            6.            7.            !

Pretend you are a magical programmer who can make a computer do anything in the world.

Write a short paragraph telling what your magical computer would do.
