

# Lizard

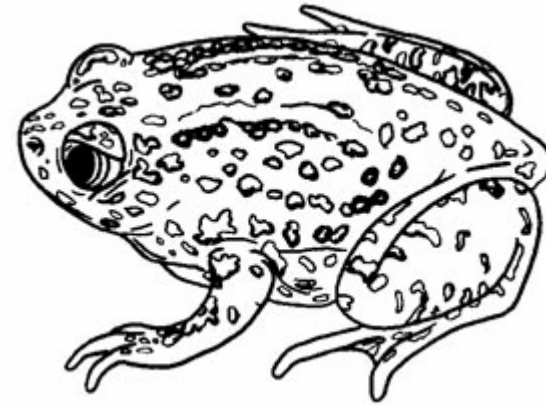

www.pnl.gov/pals

Lizards are the most abundant form of reptile life found in the world today. All lizards are *ectothermic*, or cold-blooded, which means their inside body temperature is the same as the temperature of the air outside of their bodies. So, when the air temperature is cool, lizards sit in the sun to get warm, and when it is hot, they sit in the shade to get cool.

# Bullfrog

www.pnl.gov/pals

Bullfrogs are amphibians. They live both on land and in water. They are nocturnal animals capable of jumping nine times their length.

Bullfrogs are the largest frogs in North America. Their bodies are usually a dull green color, but may be brownish, and adults range in size from 3.5 to 6 inches long.
